KAESER
COMPRESSORS®

Built for a lifetime.

A Complete Solution Resource

Kaeser Compressors, Inc., one of the world's leading suppliers of compressed air equipment, offers stationary electric rotary screw compressors, dental compressors, portable compressors, compressed air dryers, air receivers, and air treatment products on Schedule 56 at GSA Advantage!

Compressed air provides power to pneumatic tools and equipment for countless GSA customers every day in thousands of government facilities, both military and civilian. It's a vital utility in armories, automotive and aircraft maintenance, metal fabrication and machine shops, woodworking, printing, post offices, hospitals, laboratories, and laundry plants. Any facility with automation of any kind is likely to rely on compressed air.

Like water, gas, and electricity, compressed air is usually a mission-critical utility. For this reason, Kaeser builds products for superior reliability and long life, and for ease of maintenance. In addition, Kaeser equipment is energy efficient. This matters to GSA customers because air compressors are often the largest power consumers in their facility. Most facilities produce compressed air very inefficiently and waste much of it. One of the driving

philosophies at Kaeser is to reduce each customer's energy costs, not only to reduce their life cycle costs but also their carbon footprint. We do this by building products that are more efficient, by designing systems that are more efficient, and by educating our customers.

Beyond the products currently sold through GSA, our product line includes industrial oil-free compressors, air system controllers, and compressed air piping. We also have rotary lobe and screw blowers and vacuum pumps for wastewater treatment, soil remediation, pneumatic conveying, vacuum hold-down, and other applications.

Our capabilities extend far beyond equipment sales. Our staff engineers offer complete design services as part of our sales process. We can plan and perform installations and provide operator training as part of start-up. We have comprehensive preventive maintenance and repair services, with factory trained technicians and fully stocked service vans. Further, we plan and execute compressed air energy studies to identify opportunities for energy savings and productivity improvement.

Kaeser is more than an equipment vendor—we are a complete solution resource.

Compressor Products

Industrial Screw Compressors

Kaeser's rotary screw air compressors feature the proprietary Sigma Profile™ airend. Available from 3 to 700 hp with capacities from 9 to 3142 cfm, and pressures up to 217 psig. Sigma Frequency Control (SFC) units feature variable frequency drive (VFD) technology. "T" versions with integrated dryer also available on most models.

Screw Compressor Packages

Kaeser also offers the AIRCENTER and Airtower—complete compressed air packages that integrate our compressor with controller, dryer, tank, and drain into one compressed air system. These systems are ideal where floor space is limited.

Mobilair™ Portable Compressors

Available in a wide range of models from 50 to 1200 cfm at 100 psig, these units feature the power-saving Sigma Profile airend, heavy-duty industrial engines, and low noise enclosures.

CAGI Certified Performance

Our compressors' energy efficiency has been tested and confirmed by an independent laboratory as part of the Compressed Air and Gas Institute's **Rotary Screw Compressor Performance Verification Program**. CAGI data sheets are available for screw compressors from 5 to 200 hp at kaeser.com/cagi

Air Treatment Products

Refrigerated Air Dryers

Non-cycling, cycling, and Dual Control dryers provide maximum efficiency by offering the best drying solution for a wide array of applications from 10 to 12,500 scfm.

Desiccant Air Dryers

Regenerative dryers produce pressure dew points as low as -100°F. Kaeser's heatless KAD, heated purge KED dryers, and blower purge KBD dryers complete Kaeser's comprehensive desiccant dryer line. Available from 7 to 5400 scfm.

Compressed Air Filters

Designed with housings that have larger flow areas to ensure low pressure drop, Kaeser filters provide easy installation, operation, and maintenance. Kaeser filters maintain high capture rates and filtration efficiencies across a wide range of flows, 20 to 21,250 scfm, and pressures up to 1000 psig.

Drain Traps and Condensate Management

Kaeser's Automatic Drains like the Automatic Magnetic Drain (AMD) and the award-winning Eco-Drain improve air quality and reduce maintenance. Timed Electric Traps and Automatic Drain Traps complete our condensate drain product line.

The Kaeser Condensate Filter automatically removes lubricant from compressor condensate. This allows for easy and economical disposal of compressed air condensate in an environmentally responsible way. The low maintenance system requires no electricity for operation.

ISO Certified

Kaeser's ISO 9001 certified quality management ensures that all customer requirements with regards to product and service quality are completely fulfilled. Continuous improvement processes enable you to benefit from quality of the very highest level.

ENERGY STAR Partnership

Kaeser Compressors is a partner in the ENERGY STAR® program. Introduced by the U.S. Environmental Protection Agency in 1992 to identify and label energy-efficient products, it has expanded to include many partners committed to improving energy efficiency by assisting their customers in making smart choices for energy management.
