

Remote Monitoring System

Kaeser View

Kaeser View

View your compressed air system anytime, anywhere.

Kaeser View gives you the tools to remotely monitor your compressed air system, conveniently schedule service, simplify troubleshooting, and maximize up time, for proactive predictive maintenance.

Technology to connect

Now more than ever, people are relying on information technology to monitor their plant equipment and stay on top of preventive maintenance schedules and troubleshooting. Whether you have a large plant or multiple locations, it is time consuming to visit each machine to check its status and condition.

Remote monitoring offers proactive rather than reactive strategies for managing key production assets. This applies to your compressed air system as well as production equipment. Connectivity is key to ensuring remote monitoring is fully integrated into a plant, but the integration of communications equipment and coding required are often barriers to implementing this capability. Kaeser View removes those barriers.

Kaeser View provides a cellular modem communications link that is easily integrated into the electrical cabinet of individual Kaeser compressors, blowers, and vacuum units. Or you can opt for a single wall mounted device to monitor several units. Kaeser View is also fully compatible with multi-unit systems controlled by a Sigma Air Manager.

Kaeser View increases your awareness of system status and enables you to head off service issues before they cause downtime. Key capabilities include:

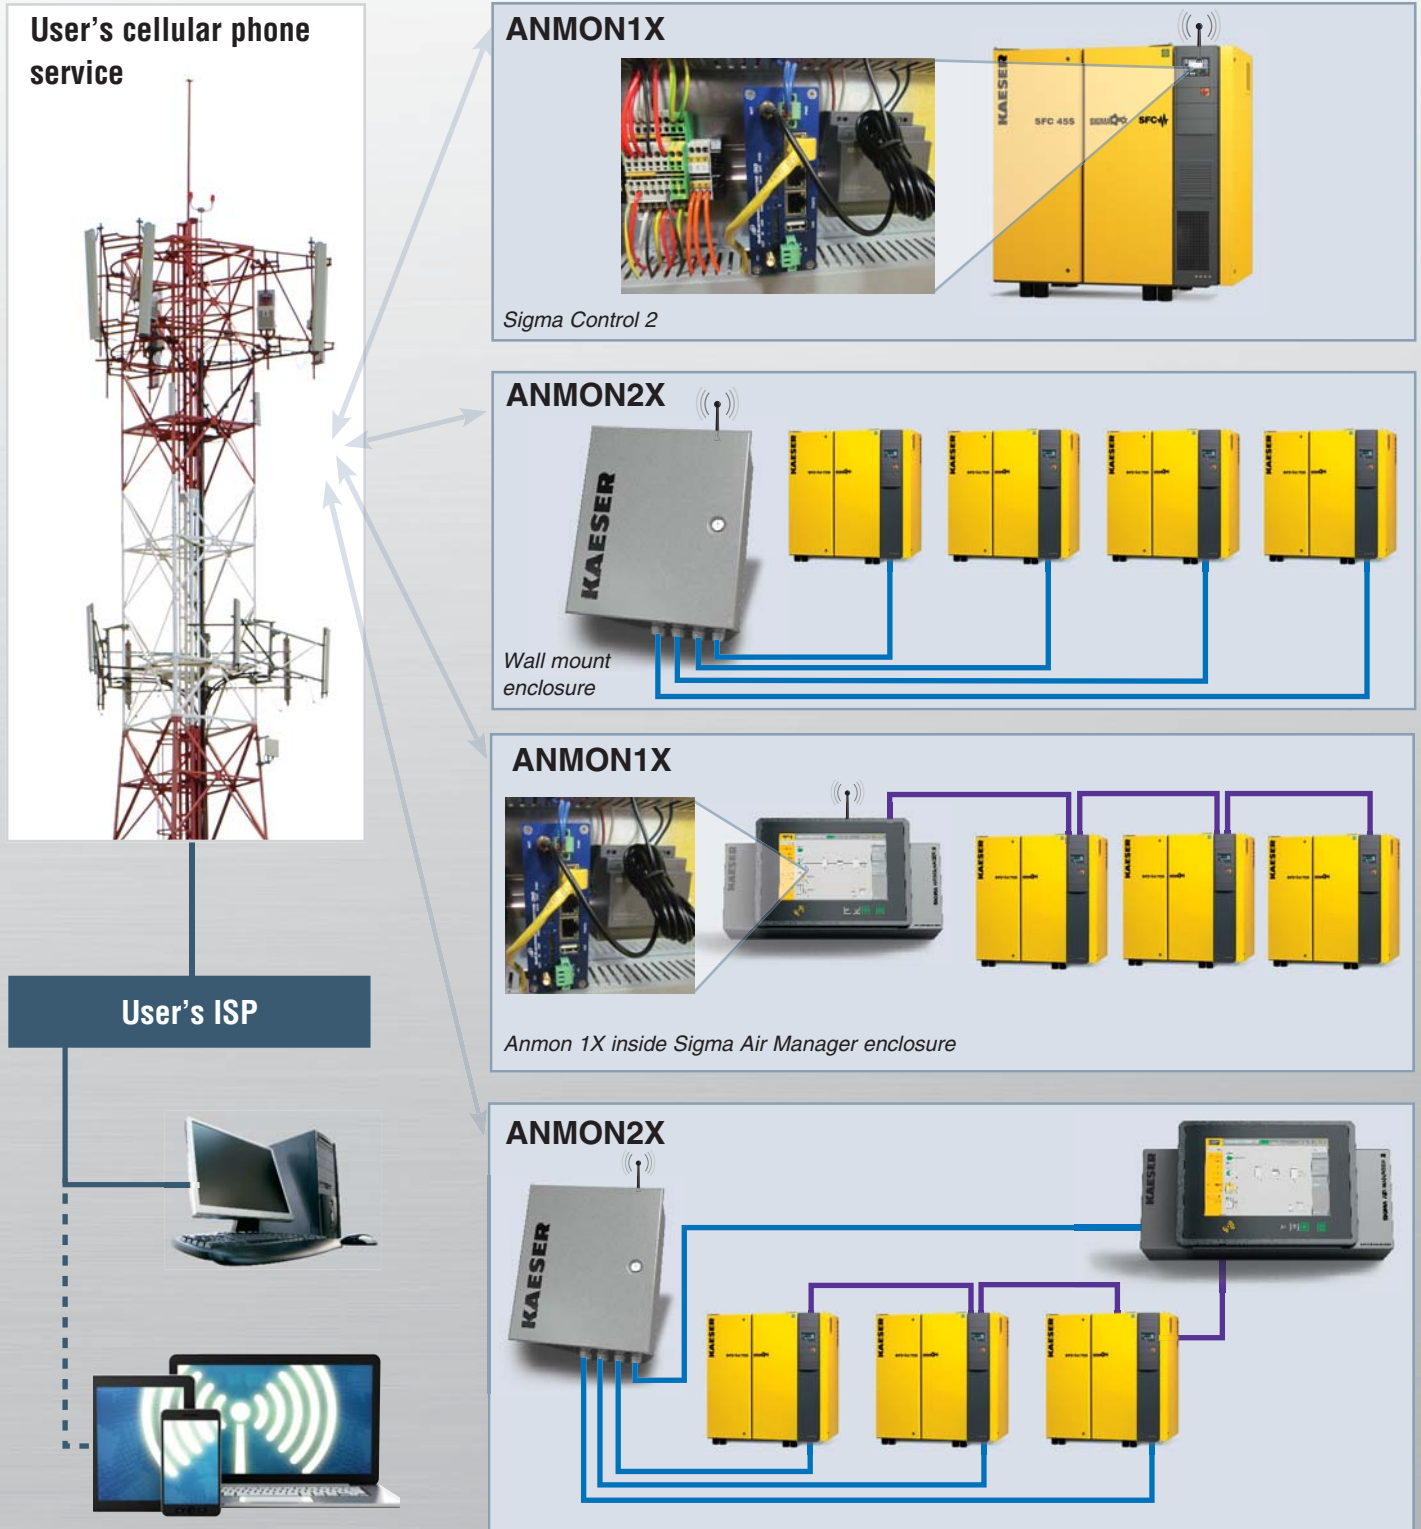

- Viewing system information in real time
- Navigating Sigma Control 2™ and SAM SAC Plus and SAC Basic screens
- Tracking load and service hours
- Checking energy consumption
- Monitoring service intervals
- Automatically notify your service team (via text or email) to schedule both preventive and non-routine service

The enhanced visibility afforded by Kaeser View helps you reduce downtime, lower maintenance costs and, in general, more effectively manage a critical asset in your plant(s).

Remote Monitoring Made Simple

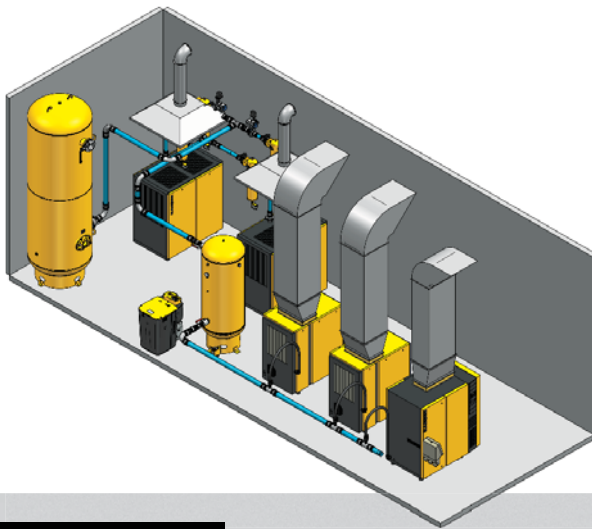

Easily Integrates with Sigma Control 2™ or SAM

Technical Specifications

	ANMON1X Integrated Version*	ANMON2X Wall Mount Version*
Type 1 Enclosure	N/A	X
UL Listed and Recognized Components	X	X
Power Monitoring Relay	N/A	X
Cellular Antenna	X	X
24V Power Supply Included	X	X
Network Switch (Connects up to 7 devices)	N/A	X
Battery Back-up (Up to 20 mins. power)	N/A	X
Cellular Modem Router	X	X
Can Be Used With SAM	X	X
Can Be Used with Sigma Control 2	X	X

*VPN, cellular plan, and email server not included.

Compressed Air System Design

Kaeser's team of engineers are always at your service to help design or optimize your compressed air system.

Using our Air Demand Analysis (ADA) and Kaeser Energy Saving System (KESS) we can evaluate your existing installation and demonstrate how proposed changes will improve your system performance.

Kaeser can also produce two-dimensional and three-dimensional drawings of the proposed system. This is a huge benefit in project planning. It helps visualize new equipment and how it will fit into the building along with existing equipment, piping, walls, vents, etc. This facilitates installation planning.

From complex installations, to challenging environments, to limited space, Kaeser can design a system to meet your specific requirements for performance and reliability.
